DETAILED ACTION

Allowable Subject Matter

Claims 1 – 17, 19 and 20 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Sroka, Yamada et al. and or Tsuda do not show the specific connection of the switch connected to a second end of the resonator and the impedance element connected to a first end of the resonator, such as claimed in claim 1, where Sroka, Yamada et al. and or Tsuda all show where the switch and/or impedance element are only connected to one end of the resonator where the opposite end of the resonator is connected to ground. Sroka, Yamada et al. and or Tsuda do not show the combination of a first switch coupled to the resonator and ground, an impedance element coupled to the resonator and a second switch coupled to the ferroelectric component where Sroka and Yamada et al. show dual resonators, each connected to a diode switch where both resonators comprise the filter, thus each switch being connected to a separate resonator where a single resonator, impedance element and switch does not comprise the switchable filter and or where the second switch does not switch between a first and second configuration, such as claimed in claim 19, where both the first and second resonators and first and second switches of Sroka and Yamada et al. all work in conjunction to provide the first and second configuration; nor would it be obvious to combine the prior art to meet the limitations of independent claims, thus the claims are found in condition for allowance.

With respect to rejections of claims 1, 6 and 16 under 35 U.S.C. 101 Obvious Double Patenting, the Examiner agrees with Applicant's arguments contained on page 7 where Applicant's amendments to claim 1 renders the rejection moot, thus the rejection is withdrawn.
